

CareRx Clinical Experts Contribute to Research Advancing Antibiotic Use in Seniors Care

New research is helping strengthen how antibiotics are selected and managed in long-term care and retirement homes, where antimicrobial stewardship plays an important role in supporting the health of older adults.

CareRx clinical experts Dan Dalton, Clinical Consultant Pharmacist; Denis O'Donnell, Director, Research and Program Evaluation; and Stephana Hung, Vice President, Clinical Services, contributed to studies published in the *Journal of Clinical Microbiology* and *Antimicrobial Stewardship & Healthcare Epidemiology*. The research examines practical approaches to more informed antibiotic use, including regional-local urinary antibiograms for long-term care homes and a quality improvement pilot using prospective audit and feedback in retirement homes.

Together, the studies add to the evidence available to care teams working to improve antimicrobial stewardship and support better health outcomes for seniors.
